Understanding America's Greatest Existential Threats Dr. J. R.

Maxwell, 2020-12-08 In this introductory volume, readers will learn about the vital role that the various Critical Infrastructure (CI) sectors play in America in the context of homeland security. The protection, maintenance and monitoring of these interdependent CI assets is a shared responsibility of governments, private sector owner/operators, first responders and all those involved in homeland security and emergency management. As this foundational learning resource demonstrates, rapidly advancing technologies combined with exponential growth in demand on the aging infrastructure of America's power grid is setting the stage for a potentially catastrophic collapse that would paralyze each and every facet of civilian life and military operations. This meticulously researched primer will guide readers through the known world of power failures and cyber attacks to the emerging threat from a High altitude Electromagnetic Pulse (HEMP). A HEMP would cause cascading failures in the power grid, communications, water treatment facilities, oil refineries, pipelines, banking, supply chain, management, food production, air traffic control and all forms of transportation. Each chapter in America's Greatest Existential Threat Vol 1 begins with learning objectives and ends with a series of review questions to assess take up of the chapter material. Similarly, subsequent volumes will explore HEMP and emerging issues in closer detail with current research and analysis now in development.

Modular Load Flow for Restructured Power Systems M.V. Hariharan, S.D. Varwandkar, Pragati P. Gupta, 2016-02-15 In the subject of power systems authors felt that a re look is necessary at some conventional methods of analysis In this book the authors have subjected the time honoured load flow to a close scrutiny Authors have discovered and discussed a new load flow procedure Modular Load Flow Modular Load Flow explores use of power a scalar as source for electrical circuits which are conventionally analysed by

means of phasors the ac voltages or currents The method embeds Kirchhoff's circuit laws as topological property into its scalar equations and results in a unique wonderland where phase angles do not exist Generators are shown to have their own worlds which can be superimposed to obtain the state of the composite power system The treatment is useful in restructured power systems where stakeholders and the system operators may desire to know individual generator contributions in line flows and line losses for commercial reasons Solution in Modular Load Flow consists of explicit expressions which are applicable with equal ease to well conditioned ill conditioned and very low voltage situations It is found to be computationally much faster than the iterative load flows and indicates promise for online application Indian blackouts of July 30 and 31 2012 are analysed using an equivalent grid network to indicate its utility Besides its ability to deal with ground reality in power systems Modular Load Flow points to a theory that unveils interesting mathematical structures which should entice avid researchers Second author has had first author as teacher and third author as student The lecture notes therefore reflect ethos of three generations of teachers
