Keservani, Anil K. Sharma, 2018-09-24 This volume addresses efforts to overcome the shortcomings of conventional dosage forms by exploiting the principles of nanoscience to deliver drugs for medical treatment Nanodispersions are an important aspect because they possess globules particles in sizes usually below 1000 nm in which the drug is dispersed in a continuous medium employing surface active agents as stabilizers With chapters written by experienced scientists and researchers in the field this volume provides an abundance of information on various aspects of nanodispersions for drug delivery The book is divided into several sections nanoemulsions nanosuspensions and diverse dispersed systems The chapters detail what nanodispersions have demonstrated in the past and what they are expected to continue to do in the future as the technology further evolves Key features Provides an overview of nanoemulsions for drug delivery Introduces the general principles classification and methods of preparation of nanoemulsion based drug delivery systems Presents information relevant to specific routes of applications of nanoemulsions Looks at the various aspects of nanosuspensions including their formulation components preparation methods unique features methods of characterization and applications in various routes of administration Explores nanomicellar approaches for drug delivery Discusses the preparation applications and clinical considerations of nanogels for drug delivery **Lead Generation** Jörg Holenz, 2016-03-16 In this comprehensive two volume resource on the topic senior lead generation medicinal chemists present a coherent view of the current methods and strategies in industrial and academic lead generation This is the first book to combine both standard and innovative approaches in comparable breadth and depth including several recent successful lead generation case studies published here for the first time Beginning with a general discussion of the underlying principles and strategies individual lead generation approaches are described in detail highlighting their

strengths and weaknesses along with all relevant bordering disciplines like e.g. target identification and validation, predictive methods, molecular recognition or lead quality matrices. Novel lead generation approaches for challenging targets like DNA encoded library screening or chemical biology approaches are treated here side by side with established methods as high throughput and affinity screening, knowledge or fragment based lead generation and collaborative approaches. Within the entire book a very strong focus is given to highlight the application of the presented methods so that the reader will be able to learn from real life examples. The final part of the book presents several lead generation case studies taken from different therapeutic fields including diabetes, cardiovascular and respiratory diseases, neuroscience, infection and tropical diseases. The result is a prime knowledge resource for medicinal chemists and for every scientist involved in lead generation. Data
