Summary of Corrections ,2002 **Jewish Poland—Legends of Origin** Haya Bar-Itzhak,2018-02-05 This book will be of interest to scholars in folklore studies as well as to scholars of Judaic history and culture **The Oxford Handbook of Public History** ,2017-09-20 The Oxford Handbook of Public History introduces the major debates within public history the methods and sources that comprise a public historian s tool kit and exemplary examples of practice It views public history as a dynamic process combining historical research and a wide range of work with and for the public informed by a conceptual context The editors acknowledge the imprecision bedeviling attempts to define public history and use this book as an opportunity to shape the field by taking a deliberately broad view They include professional historians who work outside the academy in a range of institutions and sites and those who are politically committed to communicating history to the wide range of audiences This volume provides the information and inspiration needed by a practitioner to succeed in the wide range of workplaces that characterizes public history today for university teachers of public history to assist their students and for working public historians to keep up to date with recent research This handbook locates public history as a professional practice within an intellectual framework that is increasingly transnational technological and democratic While the nation state remains the primary means of identification increased mobility and the digital revolution have occasioned a much broader outlook and awareness of the world beyond national borders It addresses squarely the tech savvy media literate citizens of the world the digital natives of the twenty first century in a way that recognizes the revolution in shared authority that has swept museum work oral history and much of public history practice This volume also provides both currently practicing historians and those entering the field a map for understanding the historical landscape of the future not just to the historiographical debates of the academy but also the boom in commemoration and history outside the academy evident in many countries since the 1990s which now constitutes the historical culture in each country Public historians need to understand both contexts and to negotiate their implications for questions of historical authority and the public historian s work The boom in popular history is characterized by a significant increase in both making and consuming history in a range of historical activities such as genealogy family history and popular collecting cultural tourism historic sites and memorial museums increased memorialization both formal and informal from roadside memorials to state funded shrines and memorial Internet sites increased publication of historical novels biographies and movies and TV series set in the past Much of this as well as a vast array of new community cultural projects has been facilitated by the digital technologies that have increased the accessibility of historical information the democratization of practice and the demand for sharing authority **Popular Science Monthly** ,1915 **Dirty Data Processing for Machine Learning** Zhixin Qi,Hongzhi Wang,Zejiao Dong,2023-11-29 In both the database and machine learning communities data quality has become a serious issue which cannot be ignored In this context we refer to data with quality problems as dirty data Clearly for a given data mining or

machine learning task dirty data in both training and test datasets can affect the accuracy of results Accordingly this book analyzes the impacts of dirty data and explores effective methods for dirty data processing Although existing data cleaning methods improve data quality dramatically the cleaning costs are still high If we knew how dirty data affected the accuracy of machine learning models we could clean data selectively according to the accuracy requirements instead of cleaning all dirty data which entails substantial costs However no book to date has studied the impacts of dirty data on machine learning models in terms of data quality Filling precisely this gap the book is intended for a broad audience ranging from researchers in the database and machine learning communities to industry practitioners Readers will find valuable takeaway suggestions on model selection and data cleaning incomplete data classification with view based decision trees density based clustering for incomplete data the feature selection method which reduces the time costs and guarantees the accuracy of machine learning models and cost sensitive decision tree induction approaches under different scenarios Further the book opens many promising avenues for the further study of dirty data processing such as data cleaning on demand constructing a model to predict dirty data impacts and integrating data quality issues into other machine learning models Readers will be introduced to state of the art dirty data processing techniques and the latest research advances while also finding new inspirations in this field

mathematicians have investigated various problems on several equations of mixed type and obtained interesting results with important applications to gas dynamics. However, the Tricomi problem of general mixed type equations of second order with parabolic degeneracy has not been completely solved, particularly the Tricomi and Frankl problems for general Chaplygin equation in multiply connected domains posed by L. Bers, and the existence, regularity of solutions of the above problems for mixed equations with non-smooth degenerate curve in several domains posed by J. M. Rassias. The method revealed in this book is unlike any other in which the hyperbolic number and hyperbolic complex function in hyperbolic domains and the complex number and complex function in elliptic domains are used. The corresponding problems for first order complex equations with singular coefficients are first discussed, and then the problems for second order complex equations are considered, where we pose the new partial derivative notations and complex analytic methods such that the forms of the above first order complex equations in hyperbolic and elliptic domains are wholly identical. In the meantime, the estimates of solutions for the above problems are obtained, hence many open problems, including the above Tricomi, Bers, and Frankl problems, can be solved. Changing Ecosystems and Their Services Levente

Hufnagel, 2020-03-11 Changing Ecosystems and their Services provides a very interesting account of the frontiers of biodiversity and ecological research. It consists of seven chapters covering mass extinctions, the Big Five, and The Sixth, which are recent global ecological crises; Caribbean biodiversity; acoustic habitat degradation due to shipping in the world's oceans; methane production of microbes in Amazonian floodplains; African mangrove forests; pollination as ecosystem services in Ethiopia; and climate change management. I am sure that this book will be very useful for everybody: researchers, teachers, students, or others interested in the field who would benefit from insight into biodiversity research. **The Economist**, 1884
