Griffin, 2012-12-06 This volume represents a collection of selected papers presented at a symposium of the same name sponsored by the Division of Colloid and Surface Chemistry held at the national Spring meeting of the American Chemical Society in Las Vegas Nevada March 29 April 1 1982 Also included are invited papers from a number of outstanding overseas liquid crystal scientists who were unable to attend the symposium The attendance at the symposium itself and the number of papers contained herein is reflective of the high level of current interest in and maturity of the field of liquid crystal research Included in this volume are papers mainly derived from the fields of chemistry and physics ranging in content from the design and synthesis of new mesogenic materials to theoretical physical treatments of anisotropic liquids One of the significant aspects of current liquid crystal research is the increasing collaboration between chemist and physicist The overlap of these two areas has been growing over the last several years and many contributions to this volume involve a molecular approach to the chemical physics of liquid crystalline materials California. Court of Appeal (2nd Appellate District). Records and Briefs California (State)., *The Physics of Multiply and Highly Charged Ions* F.J. Currell, 2013-03-14 It is arguable that most of chemistry and a large portion of atomic physics is concerned with the behaviour of the 92 naturally occurring elements in each of 3 charge states 1 0 1 276 distinct species The world of multiply and highly charged ions provides a further 4186 species for us to study Over 15 times as many It is the nature of human beings to explore the unknown This nature is particularly strong in physicists although this may not be readily apparent because these explorations are undertaken in somewhat abstract spaces It is then no surprise that we have begun to explore the realm of multiply and highly charged ions Over the past few decades a consistently high quality body of work has emerged as the fruits of this exploration This internationally based subject pursued in universities and research laboratories worldwide has expanded beyond its roots in atomic physics We now see it embracing elements of surface science nuclear physics and plasma physics as well as drawing on a wide range of technologies This speciality offers new tests of some of our most fundamental ideas in physics and simultaneously new medical cures new ways of fabricating electronic gadgets a major hope for clean sustainable energy and explanations for astrophysical phenomena It is both a deeply fundamental and a widely
