decline in the price level in the home country will involve a rise in the real money supply and if output is sluggish this will  
result in an excess supply of money This in turn will lead to a drop in the domestic interest rate and given foreign interest  
rates to a temporary depreciation of the exchange rate Structural measures could also affect investment and the current  
account by raising the rate of return on capital in the home country If capital is internationally mobile a higher rate of return  
on capital would result in a rise in investment and a temporary deterioration in the home country s current account which  
will be financed by an inflow of foreign capital The quantitative impact of financial market deregulation on the economy is
