(Re)Negotiating East and Southeast Asia Alice D. Ba, 2009-03-26 This book seeks to explain two core paradoxes associated with the Association of Southeast Asian Nations ASEAN How have diverse states hung together and stabilized relations in the face of competing interests divergent preferences and arguably weak cooperation How has a group of lesser self identified Southeast Asian powers gone beyond its original regional purview to shape the form and content of Asian Pacific and East Asian regionalisms According to Alice Ba the answers lie in ASEAN s founding arguments arguments that were premised on an assumed regional disunity She demonstrates how these arguments draw critical causal connections that make Southeast Asian regionalism a necessary response to problems give rise to its defining informality and consensus seeking process and also constrain ASEAN s regionalism Tracing debates about ASEAN s intra and extra regional relations over four decades she argues for a process driven view of cooperation sheds light on intervening processes of argument and debate and highlights interacting material ideational and social forces in the construction of regions and regionalisms

Anderson, 2007-01-04 This book is the first systematic account of the syntax and semantics of names Drawing on work in onomastics philosophy and linguistics John Anderson examines the distribution and subcategorization of names within a framework of syntactic

categories and considers how the morphosyntactic behaviour of names connects to their semantic roles He argues that names occur in two basic circumstances one involving vocatives and their use in naming predications where they are not definite the other their use as arguments of predicators where they are definite This division is discussed in relation to English French Greek and Seri and a range of other languages Professor Anderson reveals that the semantic status of names including prototypicality is crucial to understanding their morphosyntax and role in derivational relationships He shows that semantically coherent subsets of names such as those referring to people and places are characterized by morphosyntactic properties which may vary from language to language His original and important investigation will appeal to scholars and advanced students of linguistics and philosophy
