Intelligence Michael Cunningham,2013-10-22 *Intelligence* Its Organization and Development is an account of the theory of intelligence with emphasis on its organization and development It proposes a formalized approach to intelligence one that is sufficiently precise and abstract to allow a working model to be built on modern computers but that is also sufficiently flexible and factual to allow an interpretation and unification of some of the findings and concepts of psychology Comprised of five chapters this book begins with an overview of a model that reflects some psychological reality and at the same time builds computer based systems that display some degree of intelligence Several bodies of psychological knowledge and theory are reorganized and synthesized into this single model which is amenable to rapid simple and efficient computation The cell assembly theory of Donald Hebb is simplified to its bare essentials and Jean Piaget s theory of the development of sensorimotor intelligence is made more concrete and explicit Concepts such as drive and reinforcement are subsumed by the inclusion of the orienting and defense responses as variable controls on channel capacity The structure of learning and memory is also considered along with major sensorimotor systems This monograph should be a valuable resource for both psychologists and computer scientists interested in intelligence

Infant Memory Morris Moscovitch,2012-12-06 The study of infant memory has flourished in the past decade for a number of reasons not the least of which is the tremendous growth of interest in normal and pathological adult memory that began in the late fifties Despite its common lineage to other areas of memory research however infant memory has perhaps been the least integrated into the mainstream In reading the literature one gets a sense of discontinuity between the study of infant memory and memory at all other stages of development from childhood to old age The reasons for this are not hard to find The techniques used to study memory in infants are usually very different from those typically used even in children These techniques often limit the kind of inferences one can draw about the nature of the memory systems under investigation Even when terms concepts and theories from the adult literature are applied to infants they often bear only a loose relationship to their original usage For example an infant who stares longer at a new pattern than an old one is said to recognize the old one and to have a memory system that shares many characteristics with a memory system that makes recognition possible in adults Similarly an infant who emits a previously learned response such as a leg kick to an old stimulus is said to recall that response and to be engaged in processes similar to those of adults who are recalling past events

Biology of Perceptual Systems Edward Carterette,2012-12-02 *Handbook of Perception Volume III Biology of Perceptual Systems* reviews the literature on the biological aspects of human perception with emphasis on perceptual systems and elements of sensory physiology This volume is organized into 19 chapters and begins with a discussion of energy

transduction detection and discrimination along with the properties of neurons alone and as conjoined in nets The focus then shifts to psychogenesis the relatively new field of ethology and the natural diversity and evolutionary divergence of sensory systems The chapters that follow examine the genetics of behavior the facts and theories about the way in which animals and men construct patterned stimulation of receptors into significant objects and the structure and function of sensory systems on which vertebrates depend for their construction of the varieties of experience The book methodically introduces the reader to chemoreception tasting and smelling cutaneous mechanoreception of position velocity transients active texture perception mechanisms of spatial orientation and of motion in space thermoreception vision and audition In almost every case the underlying physiological mechanisms are related to the psychophysical or perceptual observations This book is a valuable resource for psychologists biologists and natural scientists as well as for those who are interested in the biology of human perception

Cohen,Philip Salapatek,2013-10-22 Infant Perception From Sensation to Cognition Volume II Perception of Space Speech and Sound covers comprehensive programmatic examinations which are arranged along a continuum from basic sensory and neurophysiological functioning to information processing and memory This volume is organized into two parts encompassing six chapters and begins with the difficulties prior research has had in assessing infant perception of depth or space The next chapters provide a link between infants perception of space and their perception of objects and evaluate both psychometric studies of object concept development and studies focusing specifically on Piaget s theory These topics are followed by discussions of the infant s development of the concept of self and that concept is used to explain the infant s perception of other persons The final chapters deal with the infant vision and audition These chapters specifically describe the developmental anatomy of the auditory pathway and the electrophysiological functioning and capacity A series of studies on the infant s receptiveness for the segmental units of speech the ability to perceive phonemic feature contrasts and the manner in which this perception occurs is also provided This book will prove useful to developmental psychologists and biologists
