**Photosynthesis Bibliography volume 1 1966/1970** Zdenek Sesták,J. Catský,2012-12-06 It is generally accepted that photosynthesis whereby solar is transformed into geobiochemical energy is one of the most important processes in the biosphere When we realize that the human population most of which is starving will double in 20 30 years and that photosynthesis is in practice the only source direct or indirect of food not only for men but for all living beings its importance becomes even plainer This fact was recognized from the outset of the International Biological Programme when photosynthesis was selected as one of the principal problems to be concentrated on The significance of the IBP in initiating a broader based approach and worldwide collaboration need not be emphasized here it is merely necessary to consider the rapid increase in the number of papers on photosynthesis since its inception It is of fundamental importance for scientists working on photosynthesis to get information on what has been done in recent years in this discipline Thus as complete as possible a bibliography is badly needed The complexity of this problem requires also that the progress of ecology chemistry and physics as far as they concern photosynthesis be followed Such a bibliography covering at least the last ten years will be indispensable for final synthesis of the results of the IBP photosynthetic programme      **Biennial Survey of Education in the United States** United States.
