Thomas E. Beesley, Raymond P. W. Scott, 1999-01-26 Chiral Chromatography Thomas E Beesley Advanced Separation  
Technologies Inc Whippany New Jersey USA Raymond P W Scott Chemistry Department Georgetown University Washington  
DC USA and Chemistry Department Birkbeck College University of London UK Analytical techniques based on separation  
processes such as chromatography and electrophoresis are finding a growing range of applications in chemical  
pharmaceutical and clinical laboratories The Wiley Separation Science Series provides the analyst in these laboratories with  
well focused books covering individual techniques so that they can be applied more efficiently and effectively to  
contemporary analytical problems The different enantiomers of a drug can exhibit widely different physiological activity in  
degree and nature As a result the separation and identification of enantiomers is now a very important analytical problem  
and chiral chromatography is the natural technique to apply to the resolution of such mixtures Chiral Chromatography  
provides the reader with a basic understanding of the nature of chromatographic separations and relates the principles  
specifically to the separation of enantiomers The following information is included chiral separations involving both gas and  
liquid chromatography descriptions of the apparatus used for both techniques detailed discussion on the retention  
mechanism that results in chiral selectivity the structure and synthesis of a wide range of chirally active stationary phases  
used in both gas and liquid chromatography preparative applications for large scale purification of enantiomers applications  
of capillary electrophoresis and capillary electrochromatography In addition to the above a large number of examples of the  
separation of both commercially and physiologically interesting chiral mixtures are given as is a detailed discussion on the  
mechanism of selectivity of each example Thomas Beesley was founder and is the CEO for a leading manufacturer of chiral  
stationary phases and has published papers on TLC HPLC and chiral separations involving cyclodextrins He has also  
coauthored papers with Daniel W Armstrong an expert on modern cyclodextrin columns Raymond Scott has worked in the
