Nineteenth century Italy is a vast unexplored territory in the history of modern political thought and liberal democratic
theory Apart from Mazzini Pareto and Mosca the authors of this period are little read even though their central concerns the
riddle of human liberation progress and liberty are as important today as ever This volume presents a selection of the
writings of Carlo Cattaneo 1801 1869 one of the period s most important thinkers as selected by an equally important
personage of a subsequent time the anti Fascist intellectual Gaetano Salvemini Cattaneo had a profound sense of the
historical contingencies underlying the quest both to understand human affairs and to realize a self governing society
Cattaneo s ideas and framework of analysis like those of John Stuart Mill and Alexis de Tocqueville were not shaped by a
narrow intra academic agenda but by the great social economic and political transformations of his time The issues he
addressed included problems of revolution reform and change in the passage to modernity which extended far beyond the
confines of nineteenth century Italy The selection of original pieces presented in this translation is preceded by an
introduction by the editors Carlo G Lacaita and Filippo Sabetti which guides the reader through Cattaneo s thinking and puts
it in a comparative context Ultimately however it is the editors goal to let this profound Italian thinker speak for himself

Processing and Biological Systems Samuli Niiranen,Andre Ribeiro,2011-03-10 Living beings require constant information
processing for survival In cells information is being processed and propagated at various levels from the gene regulatory
network to chemical pathways to the interaction with the environment How this is achieved and how information is coded is
still poorly understood For example what a cell interprets as information in the temporal level of an mRNA and what is
interpreted as noise remains an open question Recently information theoretical methods and other tools developed in the
context of engineering and natural sciences have been applied to study diverse biological processes This book covers the
latest findings on how information is processed in various biological processes ranging from information processing and
propagation in gene regulatory networks to information processing in natural language An overview is presented of the state

of the art in information processing in biological systems and the opinion of current leaders in this research field on future research directions
