Climate-Resilient Agriculture Ashutosh Singh, Saurabh Pandey, 2024-07-05 Developing climate smart crops is vital to securing food security around the world. This new book discusses the state of the art technologies that can help to mitigate plant abiotic stresses in cultivated crops. It covers the current aspects of climate resilience agriculture including the crucial physiological, biochemical, and molecular aspects of cultivated crops under stress conditions which play a pivotal role in developing climate smart crops. The volume explores breeding, omics, genetic engineering, bioengineering of metabolic pathways, artificial intelligence, and more. Key features: Addresses the current and future challenges of climate changes on food security. Details the impact of different biotic and abiotic stresses along with their interactions and effect on crop plants in climate changing scenarios. Gives a comprehensive account of molecular mechanisms associated with different stresses in crop plants. Discusses advances in breeding and biotechnological techniques to tackle the different stresses in challenging climatic fluctuations. Highlights various emerging approaches and technologies currently being used in developing climate smart crops. Provides success stories of crop improvement against the different stresses. Breeding Climate Resilient and Future Ready Oilseed Crops

Manish K. Pandey, M. G. Mallikarjuna, H. C. Lohithaswa, Muraleedhar S. Aski, Sanjeev Gupta, 2025-01-31 This edited book covers the application of modern genomics tools for developing climate smart oilseed cultivars. The book's prime focus is on utilizing available oilseed genomic resources and application of next generation genetics and breeding tools viz genome wide association mapping, genomic selection, genome editing, and accelerated breeding pipelines and their efficacy for rapid development and delivery of stress resilient oilseeds cultivars. Oilseeds are crucial for human and animal nutrition and cater to diverse industrial applications. Besides oil content, the oilseed meal possesses proteins and a higher proportion of essential amino acids which benefit human well-being. Additionally, the contribution of oilseeds towards renewable energy mitigates the risk of climate change by reducing carbon footprint. Hence it is imperative to enhance oilseeds production from the current 178 to 282 million tons by 2050 to meet the demands of both the population and the environment. The current genomics era delivered various genomic resources in oilseed crops which resulted in the discovery of genes for several agronomic and stress resilience traits and resistance to pests and diseases. Further, the availability of next generation plant breeding tools such as genomic selection, genome editing, and speed breeding are being implemented along with traditional and marker assisted selection. Thus, the book is framed to compile the importance and utility of next generation breeding tools for enhancing stress resilience in oilseed crops in the climate change era. The book is exciting and valuable to national and international agricultural scientists, scholars, and graduate students associated with oilseed crops improvement in specific and field crops in general. The book also serves as a reference in formulating various oilseed improvement programs for policymakers and research grant managers. **Crop Improvement**

Pankaj Kumar, Ajay Kumar Thakur, 2021-06-29 Crop Improvement: Biotechnological Advances. Biomedical Science. The field of

biotechnology is advancing at a fast pace The availability of low cost DNA genome sequencing technologies has led to the discovery and functional characterization of myriad of genes imparting stress tolerance and quality traits The omics group of technologies including genomics proteomics transcriptomics and metabolomics has revolutionized the agricultural biotechnology sector The Nobel Prize winning technology such as the genome editing technique is being employed to edit various gene functions in plants aiding in crop improvement This technology may be adopted very quickly by consumers compared with the transgenic technique because the genome edited plants have no adverse effects on the genome of the plant itself and on the environment and related species non target organisms In this book authors have attempted to compile the latest techniques of agricultural biotechnology and their applications in crop improvement Certain chapters have been dedicated to describe the use of nanotechnology a fast emerging new technique in the agriculture sector Features Development potential and safety issues in biotechnology Advances in genomics proteomics and transcriptomics in agriculture Protein bioinformatics and its applications Genetically modified GM technology and its implications Genome editing in crop improvement Marker assisted selection MAS in crop improvement Mutation breeding Cryobiotechnology Nanotechnology and biosensors This book includes real world examples and applications making it accessible to a broader interdisciplinary readership We hope that it will serve as a reference book for researchers engaged in molecular biology and biotechnology and will act as a ready reckoner for postgraduate PG students in the biotechnology discipline Statistique agricole ...
