Commissioners Great Britain. Royal Commission on Venereal Diseases,1916 *The Neurobiology of the Prefrontal Cortex* Richard E. Passingham,Steven P. Wise,2012-07-12 The prefrontal cortex makes up almost a third of the human brain The Neurobiology of the Prefrontal Cortex presents a new theory about its fundamental function Written by two leading brain scientists it is an important contribution to our understanding of the evolution and functioning of the human brain

African Genesis Sally C. Reynolds,Andrew Gallagher,2012-03-29 The discovery of the first species of African hominin *Australopithecus africanus* from Taung South Africa in 1924 launched the study of fossil man in Africa New discoveries continue to confirm the importance of this region to our understanding of human evolution Outlining major developments since Raymond Dart s description of the Taung skull and in particular the impact of the pioneering work of Phillip V Tobias this book will be a valuable companion for students and researchers of human origins It presents a summary of the current state of palaeoanthropology reviewing the ideas that are central to the field and provides a perspective on how future developments will shape our knowledge about hominin emergence in Africa A wide range of key themes are covered from the earliest fossils from Chad and Kenya to the origins of bipedalism and the debate about how and where modern humans evolved and dispersed across Africa

Understanding the Prefrontal Cortex Richard Passingham,2021 This chapter explains why this book is organized as it is Each neocortical area has a unique pattern of inputs and outputs This means that the challenge is to understand the transformation that each of the prefrontal areas performs from input to output Functional brain imaging allows us to visualize the human brain at work but it does not have the spatial resolution to identify the mechanisms that support the transformations that the brain performs It is neurophysiological recordings from cells that tell us how these are achieved Chapters 3 8 are therefore mainly devoted to studies that have been carried out on the prefrontal cortex of macaque monkeys because the methods are necessarily invasive Apart from recording the methods include making selective lesions in an area it is these that identify the contribution that is unique to that area The book ends by reviewing the evolution of the human prefrontal cortex and the final two chapters discuss the ways in which the human prefrontal cortex is specialized in terms of function In doing so they attempt to account for the intellectual gap between humans and other primates Provided by publisher

Final Report of the Commissioners Great Britain. Royal Commission on Venereal Diseases, 1916 Evolutionary Cell Processes in Primates M. Kathleen Pitirri, Joan T. Richtsmeier, 2021-09-14 Many complex traits define the human condition including encephalization and bipedalism The specific molecular signals and cellular processes producing these traits are the result of dramatic evolutionary change At the same time conservation of many of these developmental programs underlie both structure and function Novel methodologies and techniques allow analysis of the collective behavior of cells cell shapes tissues and organs This volume demonstrates the essential role of cellular mechanisms in the evolutionary increase in the size and complexity of the primate brain In addition and concordant with encephalization this book documents changes in the muscles and bones associated with the appearance of bipedalism Genetic changes are the basis of these evolutionary changes but transformation of genetic information into phenotypic outcomes occurs at the level of the cell and this is the focus of the book The goal is to encourage others to adopt evolutionary cell biology as a novel and necessary approach to the genotype phenotype map of the diversification of primates human variation and human evolution The contributors to this book utilize advances in genetic analysis visualization of cells and tissues and the merging of evolutionary developmental biology with evolutionary cell biology to address questions central to understanding the human and primate evolution Key Features Explores mechanisms underlying trait distribution dispersal variation and evolution through the direct testing of hypotheses especially with respect to patterns of encephalization certain sensory modalities and growth and life history specializations Documents the advantages for anthropologists to work at the level of cells focusing on how genes provide instructions for cells to make structure and how environmental influences affect the behavior of cells Illustrates the role cell biology plays with respect to encephalization neocortical expansion variation in facial morphology locomotion and dexterity Describes novel methodologies and techniques allowing analysis of how the collective behavior of cells shapes tissues and organs Related Titles Ripamonti U ed Induction of Bone Formation in Primates The Transforming Growth Factor beta 3 ISBN 978 0 3673 7740 3 Gordon M S et al eds Animal Locomotion Physical Principles and Adaptations ISBN 978 0 3676 5795 6 Bianchi L Developmental Neurobiology ISBN 978 0 8153 4482 7 **A History of the Human Brain** Bret Stetka, 2021-03-16 Crack open this book and take a read You will be transported illuminated and delighted Psychology Today Just 125 000 years ago humanity was on a path to extinction until a dramatic shift occurred We used our mental abilities to navigate new terrain and changing climates We hunted foraged tracked tides shucked oysters anything we could do to survive Before long our species had pulled itself back from the brink and was on more stable ground What saved us The human brain and its evolutionary journey is unlike any other In A History of the Human Brain Bret Stetka takes us on this far reaching journey explaining exactly how our most mysterious organ developed From the brain's improbable watery beginnings to the marvel that sits in the head of Homo sapiens today Stetka covers an astonishing progression even tackling future brainy frontiers such as epigenetics and CRISPR Clearly and expertly told this intriguing account is the story of who we are By examining the
