**Anger** Carol Zisowitz Stearns, Peter N. Stearns, 1989-06-15 In this groundbreaking social history Carol and Peter Stearns trace the two hundred year development of anger beginning with premodern colonial America Drawing on diaries and popular advice literature of key periods Anger deals with the everyday experiences of the family and workplace in its examination of our attempts to control our domestic lives and lessen social tensions by harnessing emotion Offering an entirely new approach to the study of emotion the authors inaugurate a new field of study termed emotionology which distinguishes collective emotional standards from the experience of emotion itself The Arithmetic and Geometry of Algebraic Cycles B. Brent Gordon, James D. Lewis, Stefan Müller-Stach, Shuji Saito, Noriko Yui, 2012-12-06 The NATO Advanced Study Institute on The Arithmetic and Geometry of Algebraic Cycles was held at the Banff Centre for Conferences in Banff Alberta Canada from June 7 until June 19 1998 This meeting was organized jointly with Centre de Recherches Mathématiques CRM Montreal as one of the CRM Summer schools which take place annually at the Banff Center The conference also served as the kick off activity of the CRM 1998 99 theme year on Number Theory and Arithmetic Geometry There were 109 participants who came from 17 countries Belgium Canada China France Germany Greece India Italy Japan Mexico Netherlands Russia Spain Switzerland the United Kingdom and the United States During a period of two weeks 41 invited lectures and 20 contributed lectures were presented Four lectures by invited speakers were delivered every day followed by two sessions of contributed talks Many informal discussions and working sessions involving small groups were organized by individual participants In addition participants reprints and preprints were displayed throughout in a lounge next to the auditorium which further enhanced opportunities for communication and interaction **Structural Properties of Polylogarithms** Leonard Lewin, 1991 About ten years ago the handful of peculiar numerical diologarithmic identities known since the time of Euler and Landen gave rise to new discoveries concerning cyclotomic equations and related polylogarithmic ladders These discoveries were made mostly by the methods of classical analysis with help from machine computation About the same time starting with Bloch's studies on the application of the dilogarithm in algebraic K theory and algebraic geometry many important discoveries were made in diverse areas This book seeks to provide a synthesis of these two streams of thought In addition to an account of ladders and their association with functional equations the chapters include applications to volume calculations in Lobachevsky geometry relations to partition theory connections with Clausen's function new functional equations and applications to K theory and other branches of abstract algebra This rapidly expanding field is brought up to date with two appendices and the book concludes with an extensive bibliography of recent publications About two thirds of the material is accessible to mathematicians and scientists in many areas while the remainder requires more specialized background in abstract algebra **An Estimate of Construction Needs of Higher Education by 1980** Richard R. Holden, 1971 This report is perhaps the first consolidated assessment of construction needs

of higher education in that it is a composite of individual studies of the several states The report in effect is the first summation of the results intended by the Congress when it amended the Higher Education Facilities Act to provide for grants to State commissions for conducting either directly or through other appropriate agencies and institutions comprehensive planning to determine the construction needs of institutions and particularly combinations and regional groupings of institutions of higher education The findings of the study indicate that much remains to be done if postsecondary education is to be made available to all Americans desiring it One answer is the provision of an enormous amount of additional space However since space is not an end in itself but should be related to missions and programs it is suspected that the needs for space will be lessened somewhat as the higher education community applies its great resources and ingenuity through innovation and use of new methods and technologies
