Hermes,2023-06-10 This book presents a comprehensive review of how acoustic waves are processed by the auditory system into structured sounds such as musical melodies speech utterances or environmental sounds After an introduction an overview is given of how the ears distribute acoustic information over a large array of frequency channels that contain the auditory information used by the central nervous system to generate a mental image of what is happening around the listener This process called auditory scene analysis consists of two stages In the first stage auditory units are formed such as musical tones and speech syllables Each auditory unit is perceived at a well defined moment in time the beat location of that auditory unit Moreover from this process of auditory unit formation the auditory attributes of these auditory units emerge such as their timbre their pitch their loudness and their perceived location Each of these attributes is discussed in the corresponding chapter In the second stage of auditory scene analysis auditory stream formation the successive auditory units are integrated into auditory streams i e temporally structured sequences of auditory units that are perceived as emanating from one and the same sound source Examples of such auditory streams are musical melodies and the utterances of one speaker The temporal structure of an auditory stream its rhythm is determined by the beat locations of its auditory units The role played by the auditory attributes of the consecutive auditory units is discussed The melodies of musical streams and the intonation contours of spoken utterances emerge from this process In music the beats of parallel streams generally fit into a metric pattern and depending on harmony simultaneous tones can be perceived as consonant or dissonant Finally the book contains many sound examples including the MATLAB scripts with which they are generated **The Foreign Commerce and**

Proceedings of the Worldwide Music Conference 2021 Ildar D. Khannanov, Roman Ruditsa, 2021-04-12 This book presents sixteen chapters in Volume 1 This Volume I of the Proceedings of the Worldwide Music Conference 2021 offers a smorgasbord of scientific approaches to music The congress is one of a kind it is dedicated not to a specific field but to the interdisciplinary developments and the interaction with the representatives from actual scientific disciplines The languages of mathematics computer science semiotics palaeography and medicine are in the mix geography of the studies is also impressive Greece Mexico China Russia India Poland and USA to name just a few The purpose of such juxtaposition is to see how the terminology categorical apparatus and interpretations of music vary from science to science and how this can enrich the terminology of music theory They cover a wide range of topics that the editors divided into four subfields music in interdisciplinary contexts music and current technology musical instruments and voice and music pedagogy and medicine The opening section of the Proceedings is thus dedicated to the idea of interdisciplinarity relationship of creator of theory of harmony Rameau to sciences of his time the idea of number in music co creation and the category of musical network Three more chapters here deal with Russian palaeography Indian musical genre and the idea of musical semiotics It is a kind of opening statement from music theorists Part two music and current technology united three chapters on zero gravity concept in modern music discussion of scales as mathematical networks and the innovation in digital music making transforming it from stationary to mobile applications The third part musical instruments and voice is of special interest because it is in the study of the instruments the design acoustic characteristics and tuning and sciences have cooperated with music theory for centuries In addition to instruments one chapter here is dedicated to voice The last part musical pedagogy and medicine takes the reader even further into the interdisciplinary domain The Proceedings is written in standard English language prepared for the pleasure of reading of wide circles of professionals in different fields The purpose of the editors is to bring this rather diverse set of texts into the

context of a fruitful dialogue Handbook of Old-age, Survivors, and Disability Insurance Statistics ,1948 Proceedings of the Worldwide Music Conference 2021 Ildar D. Khannanov, Roman Ruditsa, 2021-09-07 This Volume II of the Proceedings of the Worldwide Music Conference 2021 continues the line of publications of the first volume in a highly interdisciplinary mode This time we offer eight chapters that provide the in depth study of music in four large sub fields mathematics language and theory of narrative evolution and perception and finally sociology The first chapter by Roman Ruditsa is devoted to the study of structural pitch organization This is based upon a formal logical interpretation of the idea of pitch The chapter contains formal definitions of such objects as tones intervals and interval systems and a demonstration of the logical relationships that exist between them The second chapter in the same mathematical venue by Celina Richter and Stefan E Schmidt revisits the millennial question of the essence of an interval using highly advanced mathematical language the categories of monoid and the algebraic theory of measurement The next block is dedicated to language and narrative the first chapter is by Vincent Meelberg Here the reader will find fascinating developments in the ongoing deliberations on this elusive category The name of Trevor Rawbone perhaps does not need an introduction to those involved with cognitive studies of music This time his chapter deals with the idea of the language of musical thought which shifts the traditional discussion of language into a very new dimension Carlos Almada begins a new section in the book the one dedicated to evolution and perception He begins with Darwin and takes us through the exciting path of development of the science of evolution which he masterfully connects to his model of derivative analysis of music The question of psycho physiological foundation of the ethnic hearing raised in the chapter by Ila V Toropova and Irina N Simakova is a difficult one The idea of ethnic character of music had been a part of traditional musicology and usually was expressed in specific language of humanities The chapter by Daniil Shutko on the theoretical ideas of the legendary professor of St Petersburg conservatory Dr Tatiana Bershadskaya was difficult to put into any category Her concept of music was truly universal and interdisciplinary At the same time the concept and Shutko s description are as closely focused on music theory in a narrow and precise sense as possible The art and culture of consumption of wine in correlation with the choice of music for listening is a theme for a true connoisseur It becomes even more intriguing when the authors Diego P rez Fuertes Emma Juaneda Ayensa and Cristina Olarte Pascual add to the discussion the special circumstance of the pandemic and the way human spirit meets this challenge in the most graceful way
