Register of the Commissioned and Warrant Officers and Cadets of the United States Coast Guard in the Order of Precedence United States. Coast Guard, 1960 **Information and Randomness** Cristian S. Calude, 2013-03-09 The first edition of the monograph Information and Randomness An Algorithmic Perspective by Cristian Calude was published in 1994 In my Foreword I said The research in algorithmic information theory is already some 30 years old However only the recent years have witnessed a really vigorous growth in this area The present book by Calude fits very well in our series Much original research is presented making the approach richer in consequences than the classical one Remarkably however the text is so self contained and coherent that the book may also serve as a textbook All proofs are given in the book and thus it is not necessary to consult other sources for classroom instruction The vigorous growth in the study of algorithmic information theory has continued during the past few years which is clearly visible in the present second edition Many new results examples exercises and open problems have been added The additions include two entirely new chapters Computably Enumerable Random Reals and Randomness and Incompleteness The really comprehensive new bibliography makes the book very valuable for a researcher The new results about the characterization of computably enumerable random reals as well as the fascinating Omega Numbers should contribute much to the value of the book as a textbook The author has been directly involved in these results that have appeared in the prestigious journals Nature New Scientist and Pour la Science

Register of the Commissioned and Warrant Officers and Cadets of the United States Coast Guard United States. Coast Guard, 1956 **Distribution Modulo One and Diophantine Approximation** Yann Bugeaud, 2012-07-05 A treatment of cutting edge research on the distribution modulo one of sequences and related topics much of it from the last decade There are numerous exercises to aid student understanding of the topic and researchers will appreciate the notes at the end of each chapter extensive references and open problems **Descriptive Complexity** Neil Immerman, 2012-12-06 A basic issue in computer science is the complexity of problems Computational complexity measures how much time or memory is needed as a function of the input problem size Descriptive complexity is concerned with problems which may be described in first order logic By virtue of the close relationship between logic and relational databases it turns out that this subject has

important applications to databases such as analysing the queries computable in polynomial time analysing the parallel time needed to compute a query and the analysis of nondeterministic classes This book is written as a graduate text and so aims to provide a reasonably self contained introduction to this subject The author has provided numerous examples and exercises to further illustrate the ideas presented

Justice Contained Lisa J. Conant,2018-10-18 In this probing analysis of the European Union s transnational legal system Lisa Conant explores the interaction between law and politics In particular she challenges the widely held view that the European Court of Justice ECJ has through bold judicial activism brought about profound policy and institutional changes within the EU s member states She argues convincingly that this court like its domestic counterparts depends on the support of powerful organized interests to gain compliance with its rulings What Conant asks are the policy implications of the ECJ s decisions How are its rulings applied in practice Drawing on the rich scholarship on the U S Supreme Court Conant depicts the limits that the ECJ and other tribunals have to face To illuminate these constraints she traces the impact of ECJ decisions in four instances concerning market competition and national discrimination She also proposes ways of anticipating which of this court s legal interpretations are likely to inspire major reforms Justice Contained closes with a comparative analysis of judicial power identifying the ECJ as an institution with greater similarities to domestic courts than to international organizations The book advances a deeper understanding both of the court s contributions to European integration and of the political economy of litigation and reform
