**Thermochemical Processing of Biomass** Robert C. Brown, 2019-05-28 A comprehensive examination of the large number of possible pathways for converting biomass into fuels and power through thermochemical processes Bringing together a widely scattered body of information into a single volume this book provides complete coverage of the many ways that thermochemical processes are used to transform biomass into fuels chemicals and power Fully revised and updated this new edition highlights the substantial progress and recent developments that have been made in this rapidly growing field since publication of the first edition and incorporates up to date information in each chapter Thermochemical Processing of Biomass Conversion into Fuels Chemicals and Power 2nd Edition incorporates two new chapters covering condensed phased reactions of thermal deconstruction of biomass and life cycle analysis of thermochemical processing systems It offers a new introductory chapter that provides a more comprehensive overview of thermochemical technologies The book also features fresh perspectives from new authors covering such evolving areas as solvent liquefaction and hybrid processing Other chapters cover combustion gasification fast pyrolysis upgrading of syngas and bio oil to liquid transportation fuels and the economics of thermochemically producing fuels and power and more Features contributions by a distinguished group of European and American researchers offering a broad and unified description of thermochemical processing options for biomass Combines an overview of the current status of thermochemical biomass conversion as well as engineering aspects to appeal to the broadest audience Edited by one of Biofuels Digest s Top 100 People in bioenergy for six consecutive years Thermochemical Processing of Biomass Conversion into Fuels Chemicals and Power 2nd Edition will appeal to all academic researchers process chemists and engineers working in the field of biomass conversion to fuels and chemicals It is also an excellent book for graduate and advanced undergraduate students studying biomass biofuels renewable resources and energy and power generation      **United States General Imports of Merchandise. **Production of Biofuels and Numerical Modeling of Chemical Combustion Systems** Miguel Torres García,Juan Francisco García Martín,2021-08-18 Biofuels have recently attracted a lot of attention mainly as alternative fuels for applications in energy generation and transportation The utilization of biofuels in such controlled combustion processes has the great advantage of not depleting the limited resources of fossil fuels while leading to emissions of greenhouse gases and smoke particles similar to those of fossil fuels On the other hand a vast amount of biofuels are subjected to combustion in small scale processes such as for heating and cooking in residential dwellings as well as in agricultural operations such as crop residue removal and land clearing In addition large amounts of biomass are consumed annually during forest and savanna fires in many parts of the world These types of burning processes are typically

uncontrolled and unregulated Consequently the emissions from these processes may be larger compared to industrial type operations Aside from direct effects on human health especially due to a sizeable fraction of the smoke emissions remaining inside residential homes the smoke particles and gases released from uncontrolled biofuel combustion impose significant effects on the regional and global climate Estimates have shown the majority of carbonaceous airborne particulate matter to be derived from the combustion of biofuels and biomass Production of Biofuels and Numerical Modelling of Chemical Combustion Systems comprehensively overviews and includes in depth technical research papers addressing recent progress in biofuel production and combustion processes To be specific this book contains sixteen high quality studies fifteen research papers and one review paper addressing techniques and methods for bioenergy and biofuel production as well as challenges in the broad area of process modelling and control in combustion processes
