Advanced Optoelectronic Devices Daniela Dragoman,Mircea Dragoman,2013-03-14 Optoelectronics will undoubtedly play a major role in the applied sciences of the next century This is due to the fact that optoelectronics holds the key to future communication developments which require high data transmission rates and of a extremely large bandwidths For example an optical fiber having a diameter few micrometers has a bandwidth of 50 THz where an impressive number of channels having high bit data rates can be simultaneously propagated At present optical data streams of 100 Gb s are being tested for use in the near future Optoelectronics has advanced considerably in the last few years This is due to the fact that major developments in the area of semiconductors such as hetero structures based on III V compounds or mesoscopic structures at the nanometer scale such as quantum wells quantum wires and quantum dots have found robust applications in the generation modulation detection and processing of light Major developments in glass techniques have also dramatically improved the performance of optoelectronic devices based on optical fibers The optical fiber doped with rare earth materials has allowed the amplification of propagating light compensating its own losses and even generating coherent light in fiber lasers The UV irradiation of fibers has been used to inscribe gratings of hundreds of nanometer size inside the fiber generating a large class of devices used for modulation wavelength selection and other applications
