Biomicroscopy of the Peripheral Fundus Georg Eisner, 2012-12-06 It gives me particular pleasure to write the foreword to this book this is largely due to the fact that I have devoted a substantial part of my life to the improvement of the methods used in ophthalmic research Rarely has one of my students taken the opportunity of dealing systematically with the possibilities of these methods Dr Eisner is however one of these exceptions First he has substantially improved the indentation contact glass secondly he has with untiring enthusiasm made a systematic collection of the normal and pathologic findings which with the help of the indentation contact glass and the slit lamp can be observed in the outermost periphery of the fundus and the ciliary body He has compared them to findings obtained with slight magnification in autopsy eyes and to histological sections Owing to a fortunate circumstance W Hess who is both an excellent draughtsman and a master of the special examination technique was able to reproduce the visual phenomena faithfully The reader who tries to interpret these illustrations spatially will discover that this was often not easy It is a process which requires a certain effort of imagination of space but which is very rewarding Dr Eisner's monograph is an introduction to a little known branch of biomicroscopy which broadens our means of diagnosis and promises further interesting aspects for the future I wish him well earned success
