Alharby, 2019-04-04 Plants have to manage a series of environmental stresses throughout their entire lifespan Among these abiotic stress is the most detrimental one that is responsible for nearly 50% of crop yield reduction and appears to be a potential threat to global food security in coming decades Plant growth and development reduces drastically due to adverse effects of abiotic stresses It has been estimated that crop can exhibit only 30% of their genetic potentiality under abiotic stress condition So this is a fundamental need to understand the stress responses to facilitate breeders to develop stress resistant and stress tolerant cultivars along with good management practices to withstand abiotic stresses Also a holistic approach to understanding the molecular and biochemical interactions of plants is important to implement the knowledge of resistance mechanisms under abiotic stresses Agronomic practices like selecting cultivars that is tolerant to wide range of climatic condition planting date irrigation scheduling fertilizer management could be some of the effective short term adaptive tools to fight against abiotic stresses In addition system biology and omics approaches in recent studies offer a long term opportunity at the molecular level in dealing with abiotic stresses The genetic approach for example selection and identification of major conditioning genes by linkage mapping and quantitative trait loci QTL production of mutant genes and transgenic introduction of novel genes has imparted some tolerant characteristics in crop varieties from their wild ancestors Recently research has revealed the interactions between micro RNAs miRNAs and plant stress responses exposed to salinity freezing stress and dehydration Accordingly transgenic approaches to generate stress tolerant plant are

one of the most interesting researches to date This book presents the recent development of agronomic and molecular approaches in conferring plant abiotic stress tolerance in an organized way The present volume will be of great interest among research students and teaching community and can also be used as reference material by professional researchers
