Organisers & Genes Conrad Hal Waddington, 1940 Conrad Hal Waddington's *Organisers and Genes* published in 1940 is a summary of available research and theoretical framework for many concepts related to tissue differentiation in the developing embryo. The book is composed of two main conceptual sections. The first section explores the action and nature of the organizer while the second section delves into genes and their influence on development. In this book, Waddington explored organizers in terms of their capacity and method of induction. First, he examined the nature of induction, discussing crucial experiments concerning the organizer, including Hans Spemann's discovery of the organizer and his own research into organizers in higher birds and mammals. Waddington separated the action of the organizer into two distinct categories: evocation and individuation, discussed below. The main experimental approach discussed in this book involved grafting organizing tissue from one embryo or region of an embryo to another. Waddington described evocation as non-assimilative induction or a one-way inducing signal. He presented this as a chemical signal and illustrated evocation with the dead organizer experiment. The dead organizer was shown to be capable of inducing differentiation of neural tissue in the ectoderm. He also included chemical induction by estrogens and steroids as other evocative signals. An important aspect of any signal of evocation as presented by Waddington is that the signal is specific to the differentiation of a certain tissue type.

Endless Forms Most Beautiful Sean B. Carroll, 2005 As described in this fascinating book, *Evo Devo* is evolutionary development biology, the third revolution in the science which shows how the endless forms of animals, butterflies and zebras, trilobites and dinosaurs, apes and humans were made and evolved.

The Scientific Attitude C. H. Waddington, 2020-10-14 First published in 1941, this edition in 1968, this book explores the relationship between science, culture, and society, focusing on human beings and human communities. Here, C. H. Waddington uses the concept of science to mean more than factual information about genes and haemoglobin; his subject is the effect of scientific ways of speaking on the ways in which people look at the world around them. The work discusses biological assumptions made by various communities, particularly fascist movements on human beings, and compares them with the scientific attitude. The Nazis, for instance, spoke about racial purity and German blood, but these expressions, whilst arousing emotion, had and have no rational meaning; they are inaccurate and tell us nothing of human genetics. As well as presenting a scientific argument, being published initially in 1941, this book also acts as a historical document, conveying some of the feeling of living through WWII. It highlights the fact that science and scientific assumptions have very wide implications for the whole conduct of life. Provided by publisher.

The Strategy of the Genes C. H. Waddington, 2014-04-29 First published in 1957, this essential classic work bridged the gap between analytical and theoretical biology, thus setting the insights of the former in a context which more sensitively reflects the ambiguities surrounding many of its core concepts and objectives. Specifically, these five essays are concerned with some of the major problems of classical biology: the precise character of biological organisation, the processes which generate it, and the specifics of evolution. With regard to these issues, some thinkers suggest that biological organisms are not merely

distinguishable from inanimate things in terms of complexity but are in fact radically different qualitatively they exemplify some constitutive principle which is not elsewhere manifested It is the desire to bring such ideas into conformity with our understanding of analytical biology which unifies these essays They explore the contours of a conceptual framework sufficiently wide to embrace all aspects of living systems

Behind Appearance Conrad Hal Waddington,1970 It has often been pointed out that twentieth century painting and physics share a common tendency toward probing behind appearances into the underlying structure of things The author provides a concise summary of those aspects of modern science that relate to his theme including the development of a third science that embraces information communication automation and systems theory He also provides in parallel a concise history of the modern movement in painting Jacket *An Introduction to Modern Genetics* C.
