Dept. of Agriculture,1911 Money Capital Patrick Bolton,Haizhou Huang,2024-05-21 A novel perspective on monetary and fiscal policy that views money as the equity capital of a nation A conventional economic theory monetarism holds that inflation is a monetary phenomenon driven by changes in the supply of money Yet recent experience including the aftermath of the financial crisis of 2008 and the economic development of China contradict this basic prediction In this book leading economists Patrick Bolton and Haizhou Huang offer a novel perspective viewing monetary economics through the lens of corporate finance They propose a richer theory where money can be seen as the equity capital of a nation playing a similar role as stocks for a company This innovative framework integrates the real and monetary sides of the economy with a banking sector and debt at its core In the financial world companies issue new shares only if it results in some kind of value creation this is a basic principle of corporate finance that Bolton and Huang argue can be applied to monetary economics When the government increases the money supply to finance positive net value investments when it prints money to keep the economy going it increases output not inflation This is evidenced by the strong growth in GDP and money in China over the last four decades and in the United States during World War II The effect of increasing money supply they argue depends on how money enters the system and what the money buys The principles outlined by Bolton and Huang shed new light on a range of issues including inflation monetary and fiscal policy central
