Designing Disability Elizabeth Guffey, 2017-12-28 *Designing Disability* traces the emergence of an idea and an ideal physical access for the disabled through the evolution of the iconic International Symbol of Access ISA. The book draws on design history, material culture, and recent critical disability studies to examine not only the development of a design icon but also the cultural history surrounding it. Infirmary and illness may be seen as part of human experience, but disability is a social construct, a way of thinking about and responding to a natural human condition. Elizabeth Guffey's highly original and wide-ranging study considers the period both before and after the introduction of the ISA, tracing the design history of the wheelchair, a product which revolutionised the mobility needs of many disabled people from the 1930s onwards. She also examines the rise of barrier-free architecture in the reception of the ISA and explores how the symbol became widely adopted and even a mark of identity for some, especially within the Disability Rights Movement. Yet despite the social progress which is inextricably linked to the ISA, a growing debate has unfurled around the symbol and its meanings. The most vigorous critiques today have involved guerrilla art, graffiti, and studio practice reflecting new challenges to the relationship between design and disability in the twenty-first century.

All too often, we wrote disabled architect Ronald Mace: designers don't take the needs of disabled and elderly people into account. *Building Access* investigates twentieth-century strategies for designing the world with disability in mind. Commonly understood in terms of curb cuts, automatic doors, Braille signs, and flexible kitchens, Universal Design purported to create a built environment for everyone, not only the average citizen. But who counts as everyone? Aimi Hamraie asks, and how can designers know? Blending technoscience studies and design history with critical disability, race, and feminist theories, *Building Access* interrogates the historical, cultural, and theoretical contexts for these questions, offering a groundbreaking critical history of Universal Design. Hamraie reveals that the twentieth-century shift from design for the average to design for all took place through liberal, political, economic, and scientific structures concerned with defining the disabled user and designing in its name. Tracing the co-evolution of accessible design for disabled veterans, a radical disability maker movement, disability rights law, and strategies for diversifying the architecture profession, Hamraie shows that Universal Design was not just an approach to creating new products or spaces but also a sustained, understated activist movement challenging dominant understandings.
