United States. Department of the Treasury. Office of the Secretary,1864 **Nicotinic Acetylcholine Receptors** Jean-Pierre Changeux,Stuart J. Edelstein,2005-09-08 The acetylcholine nicotinic receptor is among the most studied receptors in neuroscience Involved in muscle contraction and a wide variety of other neurological functions including the processing of nicotine it was the first receptor to be isolated and observed at the molecular level providing a major research pathway for scientists working in neuroscience biochemistry pharmacology and behavioral science This book describes four decades of scientific research that inform our current understanding of this receptor Jean Pierre Changeux and Stuart J Edelstein played important roles in pioneering research on the acetylcholine nicotinic receptor and on allosteric proteins and here they reveal the complete scientific trajectory of that research They begin with a historical perspective describing how several fields converged around a single receptor and then explain the initial receptor purification and characterization Subsequent chapters trace the investigations into various aspects of receptor structure and function including the chemical structure of the binding site the identity and properties of the ion channel and the mechanism of signal transmission In the final portion of the book Changeux and Edelstein discuss recent studies on the three dimensional structure of the receptor molecule and share their novel understanding of inherited diseases such as congenital myasthenia and epilepsy They also address the integration of the receptor into its synaptic membrane environment and its distribution physiology and regulation in brain functions and cognition Richly illustrated and lucidly written this book provides an exceptional opportunity for scientists and students to follow a historic advance in our knowledge of molecular mechanisms and the workings of the brain **The Brain as a Chemical Machine** Jean-Pierre Changeux,Stuart J. Edelstein,2005-04-01 The purpose of this book is to give a clear and straightforward account of the remarkable properties of the nicotinic receptor for acetylcholine a membrane protein involved in chemical transduction in the nervous system that is also the target of a widely used drug nicotine This molecule also happens to be the first pharmacological receptor and ion channel ever to have been identified Jean Pierre Changeux has played a leading role with Stuart J Edelstein in the investigation of nicotinic acetylcholine receptors and

allosteric proteins The aim of this book is not only to review the most recent experimental and theoretical breakthroughs in the study of the nicotinic receptor but also to give the reader a sense of the intellectual excitement and adventure that accompanied the various stages of discovery This richly illustrated volume furnishes an exceptional opportunity for scientists and students to follow the course of a major advance in our understanding of the molecular basis of brain functions Jean Pierre Changeux is honorary professor at the Collège de France and at the Institut Pasteur a member of the French Academy of Sciences In addition to *L'Homme neuronal* *Neuronal Man* he is the author of *Raison et Plaisir* and *L'Homme de vérité* He is also co author with Alain Connes of *Mathématiques et Matière* *Conversations on Mind Matter and Mathematics* and with Paul Ricoeur of *La Nature et la Règle* *What Makes Us Think* All thought provoking works Stuart J Edelstein is Professor of Biochemistry at the University of Geneva and a foreign associate member of the Academy of Sciences The nicotinic acetylcholine receptor has served for many decades as the prototype for neurotransmitter receptors Acetylcholine was the first neurotransmitter shown to be involved in the function of the mammalian brain and its nicotinic receptor the first receptor to be characterized Jean Pierre Changeux is the indisputable pioneer in this field This volume summarizes with great lucidity the history of a highly important topic in neuroscience Paul Greengard Nobel laureate in Medicine The Rockefeller University From the molecule to thought itself an extraordinary journey Changeux and Edelstein are uniquely qualified to relate this utterly fascinating story whose philosophical implications are no less important than the scientific research underlying them Jean Marie Lehn Nobel laureate in Chemistry ISIS Université Louis Pasteur Strasbourg The human brain is as much a chemical as an electrical network Its intricacy and sophistication set it apart from any known technical device The groundbreaking papers by Monod Jacob Wyman and Changeux in the 1960s on chemical regulation and control were eye opening for all us who were doing experimental research in this field and they have turned out to be crucial for understanding biological evolution and learning in a broad sense Since then Changeux and Edelstein have achieved international fame for their work on nicotinic acetylcholine receptors amply documented in this masterful account Manfred Eigen Nobel laureate in Chemistry Max Planck Institute for Biophysical Chemistry Göttingen One hesitates to call this book a monograph for despite its comprehensive treatment of a complex subject it is not meant solely for specialized readers In concentrating on a single class of neuroreceptors the nicotinic acetylcholine receptor it seeks to draw out general principles which apply more widely It will therefore be welcomed not only by serious workers and students in the field of neurobiology but also by anyone interested in the broader field of neuroscience Sir Aaron Klug OM FRS Nobel laureate in Chemistry University of Cambridge Changeux and Edelstein have provided a concise yet highly comprehensive account of perhaps the prototypical neurotransmitter complex the nicotinic acetylcholine receptor The story of how the roles played by this signal transduction system in nicotine dependence learning memory and the processes of cognition came to be unraveled is an exciting saga both beautiful and profound A lovely historico scientific document Floyd E Bloom Professor Emeritus The Scripps Research Institute Changeux

and Edelstein describe a classically Cartesian process of scientific investigation that leads to a most non Cartesian conclusion Having elucidated the mechanisms of action and interaction by which the various elements that make up the nicotinic acetylcholine receptor operate throughout the nervous system from neuromuscular junctions to the brain itself the authors turn to the role of these structures and mechanisms in supporting cognition and giving access to consciousness thus parting ways with Descartes and the view that the mind is able somehow to exist independently of the body A work of truly remarkable erudition and insight Roger Guillemin Nobel laureate in Medicine Salk Institute for Biological Studies This book is unlike any recent scientific book It is more like a forty year research meeting in one of the world's most creative neurobiology laboratories an intellectual tour de force that surveys the developmental trends and achievements of twentieth century neuroscience in molecular structural and functional terms The book therefore becomes an extraordinary educational saga moving from Sir Henry Dale's pharmacology of nicotine to genetic diseases involving mutations of the cation channel function of nicotinic acetylcholine receptors Research into these archetypal proteins has been carried out by pharmacologists biochemists molecular biologists electrophysiologists behavioral scientists and geneticists with Jean Pierre Changeux and his coworkers participating in every aspect of this remarkable inquiry Nicotinic acetylcholine receptors are the workhorse of the fast actions of the chemical signal acetylcholine abundantly transmitted in both the peripheral and the central nervous system Thanks to their variable sub unit composition they come in many flavors mediating control of voluntary muscles in the periphery and helping to regulate reward functions cognition and memory in the brain This rich functionality leads the authors to describe models of neuromuscular junction development as well a global workspace model of cognitive function and its role in effortful learning The nicotinic acetylcholine receptor was among the first ligand gated ion channels to be sequenced and studied by patch clamp methods It has been the object of neurobiological research in England France Germany Japan and the United States with contributions of equal weight being made by many teams of researchers over a number of decades all carefully chronicled and explained by the authors This book is to be highly recommended to young scientists who want to discover into how many fields a single protein molecule can take them from snake venom action to myasthenia gravis addiction learning and schizophrenia if they are willing patiently to learn new research techniques rather than specialize in a single method or instrument To investigate the nicotinic acetylcholine receptor in all its aspects requires a Renaissance mind and it is exactly this that Changeux and Edelstein have brought to bear on one of the most studied topics in neuroscience of the last century TAMAS BARTFAI Chair and Professor Department of Neuropharmacology The Scripps Research Institute

The 25th Jerusalem Symposium represents a most significant highlight in the development and history of these meetings Living within the decimal system we have celebrated with much pleasure the 10th and the 20th Jerusalem Symposia With this one we experience a feeling of particular satisfaction because 25 years is different from is more than two decades and a half

It is a quarter of a century It seems thus as if we have changed the dimension of our endeavour In no way do we loose the sense of modesty with respect to the significance of these meetings For the organizers however they do represent a continuity of efforts which we feel happy to have been able to carry out At this occasion it seems useful to say a few words about the origin of the Jerusalem Symposia and to recall the name of a colleague who played an essential role in their creation and has been a most efficient and devoted co organizer of the seven first of them This was Professor Ernst Bergmann one of the most distinguished founders of Israeli Science and a world famous physico organic chemist

Burgen,E. A. Barnard,1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology *Current Topics in Membranes and Transport* ,1989-01-01 *Current Topics in Membranes and Transport* **Annual Reports in Medicinal Chemistry** ,1987-09-02 *Annual Reports in Medicinal Chemistry* *Biotechnology: Bridging Research and Applications*
