

26826071

**Jr. Ruffolo**

**26826071:**

**Peptidergic G Protein-coupled Receptors** Pierangelo Geppetti, Werner Müller-Esterl, Domenico Regoli, 1999 Peptides are a rapidly growing class of mediators whose activity regulates homeostasis as well as pathological processes Most of the peptide activated receptors belong to the superfamily of 7 transmembrane domain receptors coupled to G proteins Peptides of different sizes from a few to more than 100 aminoacids activate peptidergic receptors by interacting at specific sites that often differ from those where antagonists bind Other receptors are activated by proteases that by cleaving the receptor extracellular region unmask a tethered ligand G protein coupled receptors for chemokines represent the way of entry of the HIV virus in target cells The great impact of non peptide agonist antagonists in current and future medicine reflects these large variety of functions and modes of activation of peptidergic G protein coupled receptors *Endothelin Receptors* Robert R. Ruffolo, Jr., 1995-05-19 Since the discovery of endothelin major advances have been made in understanding the molecular structure and function of the endothelin receptors At least two subtypes of receptors designated ETA and ETB have been identified through biochemical and pharmacological techniques These subtypes are cloned and expressed and additional subtypes appear to exist The biochemical events involved in the signal transduction processes that ultimately activate the cellular machinery involved in the end organ responses are presented as are the mechanisms by which the receptors recognize specific and different G proteins Functions mediated by the receptors at the cellular tissue and organ level are reviewed in detail as well as the roles that they may play a part in the physiologic and pathophysiologic processes in animals and in humans This book is unique in its breadth of scope The most recent and important advances from the intracellular level of the nucleus to the functional effect that endothelin receptors mediate in intact organs are compiled and reviewed **Endothelin Receptors** Jr. Ruffolo, 2024-12-20 Since the discovery of endothelin major advances have been made in understanding the molecular structure and function of the endothelin receptors At least two subtypes of receptors designated ETA and ETB have been identified through biochemical and pharmacological techniques These subtypes are cloned and expressed and additional subtypes appear to exist The biochemical events involved in the signal transduction processes that ultimately activate the cellular machinery involved in the end organ responses are presented as are the mechanisms by which the receptors recognize specific and different G proteins Functions mediated by the receptors at the cellular tissue and organ level are reviewed in detail as well as the roles that they may play a part in the physiologic and pathophysiologic processes in animals and in humans This book is unique in its breadth of scope The most recent and important advances from the intracellular level of the nucleus to the functional effect that endothelin receptors mediate in intact organs are compiled and reviewed Endothelin and Its Inhibitors Timothy D. Warner, 2012-12-06 Recent publications have addressed specific aspects of the endothelins such as their roles in disease or the importance of endothelin receptors However in this book the entire field of endothelins is covered This includes the pathways of endothelin production

and their regulation the local and systemic actions of endothelins receptors for the endothelins and the signalling pathways employed and the involvement of endothelins in a range of diseases Attention is also paid to the development through chemistry pharmacology and toxicology of endothelin antagonists and endothelin converting enzyme inhibitors with mention of all the important members of these drug classes This leads to well rounded discussions of the potential therapeutic benefit of endothelin inhibitors
