**Seaweed Biology** Christian Wiencke, Kai Bischof, 2012-06-06 Seaweeds also known as macroalgae are among the most important primary producers and act as ecological engineers on rocky coasts of the world's oceans. In addition to their extreme ecological importance, they are also of high economic relevance. Complementing available textbooks with its more research-oriented approach, this volume contains 22 chapters by renowned experts grouped in five parts. In Part I, fundamental processes and acclimation strategies of seaweeds towards the abiotic environment are covered. Part II focuses on the multitude of biotic interactions in seaweed communities, and in Part III the reader is introduced to the structure and function of the main seaweed systems of the world. The chapters of Part IV highlight and discuss the effects of global and local environmental changes on seaweeds and their communities. In the final Part V, a comprehensive overview of developments in seaweed aquaculture, industrial applications, and the overall economic importance of seaweeds is provided. Summarizing the advances in seaweed biology achieved within the last few decades, this book also identifies gaps in the present knowledge and needs for future research.

**Human Brain Evolution** Stephen Cunnane, Kathlyn Stewart, 2010-06-01 The evolution of the human brain and cognitive ability is one of the central themes of physical biological anthropology. This book discusses the emergence of human cognition at a conceptual level, describing it as a process of long adaptive stasis interrupted by short periods of cognitive advance. These advances were not linear and directed but were acquired indirectly as part of changing human behaviors. In other words, through the process of exaptation, acquisition of a function for which it was not originally selected. Based on studies of the modern human brain, certain prerequisites were needed for the development of the early brain and associated cognitive advances. This book documents the energy and nutrient constraints of the modern brain, highlighting the significant role of long-chain polyunsaturated fatty acids (LC PUFA) in brain development and maintenance. Crawford provides further emphasis for the role of essential fatty acids, in particular DHA, in brain development by discussing the evolution of the eye and neural systems. This is an ideal book for Graduate students, post-docs, research scientists in Physical Biological Anthropology, Human Biology, Archaeology, Nutrition, Cognitive Science, Neurosciences. It is also an excellent selection for a grad student discussion seminar.

**Healing With Iodine** Mark Sircus, 2018-06-13 It is estimated that 90 percent of our population is iodine deficient, and odds are most of us wouldn't think twice about it. What you don't know is that this deficiency can directly result in some terrible health problems, from cancer to heart failure to a host of other dreaded diseases. And what's even worse is that while this deficiency makes most of us highly susceptible to each of these problems, few medical professionals ever bother to see if iodine deficiency is the underlying cause of these problems. What should be a red flag for diagnosing a disease may simply go undetected and untreated. Now bestselling health author Dr.

Mark Sircus has written *Healing With Iodine* a clear guide to understanding and recognizing this missing link to better health. *Healing With Iodine* is divided into three parts. Part 1 explains what iodine is, how it works in our body to maintain maximum health, and why most of us don't get enough iodine in our diet. Part 2 looks at the many current uses iodine plays in today's treatments. It also offers guidelines for finding the right iodine and how it should be used. Part 3 looks at some of our most common health problems including thyroid disorders, heart disease, and cancer, as well as cognitive issues. It also explains how each is related to iodine deficiency and what can be done to avoid these issues. Dr. Sircus points out that there is a growing movement in the health community to use iodine as a treatment, but for too many of us, we continue to be unaware of just how crucial iodine can be to supporting our daily metabolism. Here is, in fact, a red flag that offers the type of information that we should all be aware of. And for many, it may be just the thing that helps us avoid or overcome some of these common disorders.

*Biological Adhesives* Andrew M. Smith, James A. Callow, 2007-01-12 Many creatures use adhesive polymers and structures to attach to inert substrates, to each other, or to other organisms. This is the first major review that brings together research on many of the well-known biological adhesives dealing with bacteria, fungi, algae, and marine and terrestrial animals. As we learn more about their molecular and mechanical properties, we begin to understand why they adhere so well, and with this comes broad applications in areas such as medicine, dentistry, and biotechnology.

**Iodine Chemistry and Applications** Tatsuo Kaiho, 2014-11-24 This book comprehensively covers iodine, its chemistry, and its role in functional materials, reagents, and compounds. Provides an up-to-date, detailed overview of iodine chemistry with discussion on elemental aspects, characteristics, properties, iodides, and halogen bonding. Acts as a useful guide for readers to learn how to synthesize complex compounds using iodine reagents or intermediates. Describes traditional and modern processing techniques such as starch-copper blowing out and ion exchange resin methods. Includes seven detailed sections devoted to the applications of iodine: Characteristics, Production, Synthesis, Biological Applications, Industrial Applications, Bioorganic Chemistry, and Environmental Chemistry, and Radioisotopes. Features hot topics in the field such as hypervalent iodine-mediated cross-coupling reactions, agrochemicals, dye-sensitized solar cells, and therapeutic agents.

Marine enzymes and specialized metabolism - Part B, 2018-06-22 Marine enzymes and specialized metabolism. Part B. Volume 605 in the *Methods in Enzymology* series highlights experimental methods on diverse marine enzymes involved in the construction of bioactive natural product molecules. Unique sections in this new release include discussions on polysaccharide-degrading enzymes from marine gastropods, radical SAM epimerases from sponge microbes, DMS P-demethylase in bacteria, reconstitution of particulate methane monooxygenase into membrane mimetics, the structure and function of cyanobactin enzymes, marine cyanobacterial polyketide  $\beta$ -branching, enzymology of marine cyanobacterial PKS NRPS, enzymology and structural biology, biochemical profiling of DMSP lyases, and more. Subject not before covered in a methods book. Authority and expertise of the contributors.
