Therefore investigation of flows of blood and air in physiological conduits requires an understanding of the biology chemistry and physics of these systems together with the mathematical tools to describe their functioning Volume 4 is devoted to major sets of intracellular mediators that transmit signals upon stimulation of cell surface receptors Activation of signaling effectors triggers the release of substances stored in cellular organelles and or gene transcription and protein synthesis Complex stages of cell signaling can be studied using proper mathematical models once the role of each component is carefully handled Volume 4 also reviews various categories of cytosolic and or nuclear mediators and illustrates some major signal transduction pathways such as NFkappaB axis oxygen sensing and mechanotransduction

Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers.
