Blodgett, James Lawrence Watkins, 1901 **Biotransformations in Organic Chemistry** Kurt Faber, 2012-12-06 The use of
natural catalysts enzymes for the transformation of nonnatural man made organic compounds is not at all new they have
been used for more than one hundred years employed either as whole cells cell organelles or isolated enzymes 1 2 Certainly
the object of most of the early research was totally different from that of the present day Thus the elucidation of enzyme
mechanisms was the main reason for biochemical pathways and research some decades ago It was mainly during the 1980s
that the enormous potential of applying natural catalysts to transform non natural organic compounds was recognized What
started as a trend in the late 1970s could almost be called a fashion in synthetic organic chemistry in the 1990s Although the
early euphoria during the gold rush in this field seems to have eased somewhat there is still no limit to be seen for the future
development of such methods As a result of this extensive recent research there have been an estimated 13 000 papers
published on the subject To collate these data as a kind of super review would clearly be an impossible task and furthermore
such a hypothetical book would be unpalatable for the non expert 3 7 **Salaries and Wages Supplement** California.
