Six-Figure Tables of Trigonometric Functions L. S. Khrenov,2014-06-16 THE PRESENT six figure trigonometric tables complete the series of tables of the natural values of the trigonometric functions published by Fizmatgiz Now that small computers have become very widely available almost all computations are carried out by machine and the majority of computational schemes are suited to this purpose The situation calls urgently for the availability of tables containing the natural values of all six trigonometric functions The following special factor emerges here In logarithmic computations the same relative accuracy is guaranteed more or less automatically for all values of the argument the number of correct significant figures in the result is either equal to or in rare cases one less than the number of significant figures in the mantissa of the logarithm In computations with natural values of the functions the same relative accuracy is guaranteed in practice for all arguments only by having a constant number of significant figures throughout the tables Until recently however tables of the natural values of the trigonometric functions have been compiled both in Russia and abroad with the same number of places after the decimal point which leads to a loss of accuracy when computing with functions of small angles In view of this there is an urgent need for tables of the natural values of the trigonometric functions with a constant number of significant figures which substantially guarantees roughly the same relative accuracy for all angles The present tables together with the following already published by Fizmatgiz Five figure Tables L S Khrenov 1954 Five figure Tables with the Argument in Time L S Khrenov 1954 Seven figure Tables L S Khrenov 1956 and Six figure Tables with the Argument in Time S A Angelov 1957 form a complete series with the same number of significant figures satisfying the main requirements of a wide variety of computers When compiling the present tables use was made for purposes of collation of the following tables of the natural values of the trigonometric functions The Five figure Table of H Andoyer Paris 1915 1918 the Eight figure Table of J Peters Berlin 1939 the Seven figure Table of L S Khrenov 2nd ed Gostekhizdat 1956 the Seven figure Table of H C Ives and the Eight figure Tables of the Logarithms of Numbers and of the Trigonometric functions of J Bauschinger and J Peters Geodezizdat 1942 and 1944 **Economic Policy and Technology Determinants of the Comparative Advantage of Wheat Production in Sudan** Rashid M. Sanginga, Ann Waters-Bayer, Susan Kaaria, Jemimah Njuki, Chesha Wettasinha, 2012-05-04 Agricultural research extension and education can contribute greatly to enhancing agricultural production in a sustainable way and to reducing poverty in the developing world but achievements have generally fallen short of expectations in Africa In recent years growing economic and demographic pressures coupled with the entry of new market forces and actors have created a need and an opportunity for more interactive approaches to development Understanding the existing innovation processes recognizing the potential for catalysing them and learning how to support joint innovation by different groups will be the key to success This book covers new conceptual and methodological developments in agricultural innovation systems and showcases recent on the ground experiences in different contexts in Africa The contributions show how innovation is the outcome of social learning through interaction of individuals and organizations in both creating and applying knowledge It brings examples of how space and incentives have been created to promote collaboration between farmers research extension and the private sector to develop better technologies and institutional arrangements that can alleviate poverty In 25 broad ranging chapters the book reflects cutting edge thinking and practice in support of innovation processes in agriculture and management of natural resources
