*Transition Metals in Supramolecular Chemistry* L. Fabbrizzi, Antonio Poggi, 2013-03-09 Since the pioneering publications  
on coordination chemistry by Lehn and Pedersen in the late 1960s coupled with the more orthodox interest from the  
transition metal chemists on template reactions Busch 1964 the field of supramolecular chemistry has grown at an  
astonishing rate The use of transition metals as essential constituents of multi component assemblies has been especially  
sharp in recent years since the metals are prone to quick and reversible redox changes and there is a wide variety of metal  
ligand interactions Such properties make supramolecular complexes of transition metal ions suitable candidates for  
exploration as light energy converters and signal processors *Transition Metals in Supramolecular Chemistry* focuses on the  
following main topics 1 metal controlled organization of novel molecular assemblies and shapes 2 design of molecular  
switches and devices operating through metal centres 3 supramolecular catalysts that mimic metalloenzymes 4 metal  
containing sensory reagents and supramolecular recognition and 5 molecular materials that display powerful electronic
